

# MEASURING MADE EASY

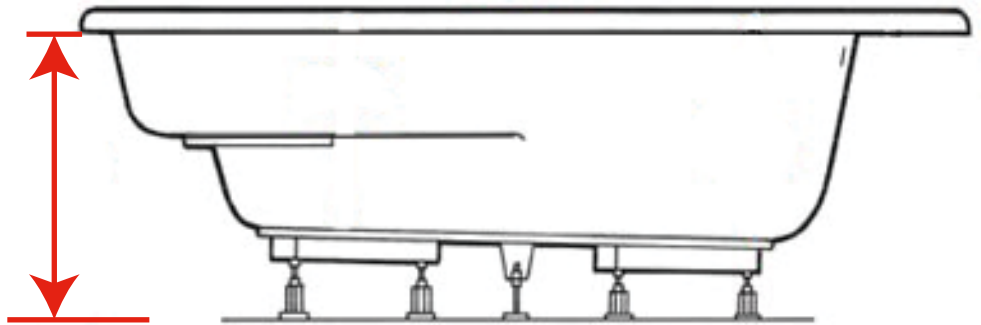

## CORNER PANEL

### HEIGHT.

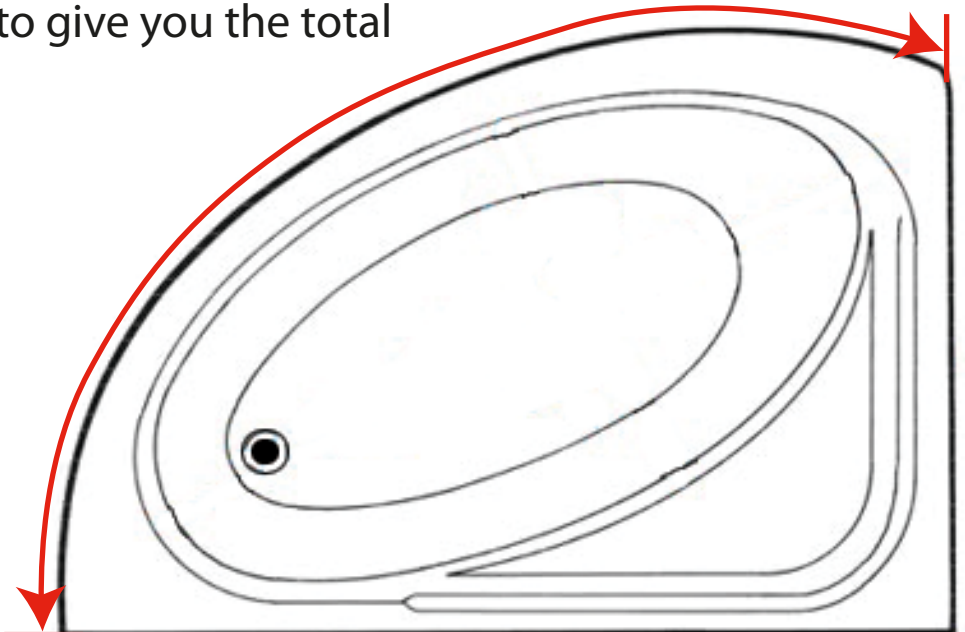

Measure from the floor to the return of your bath in the example opposite you can see the measurement is 552mm to make the panel easy to fit you must take 3-4mm off the total height so the height you would need is 548mm

NOTE: Take several measurements around the front of the bath to make sure it is a consistent height

### LENGTH.

Measure the curvature of the bath front from wall to wall as in the image below to give you the total length required

My Bath Measurements

Length = .....

Height = .....
